

UCX installation guide

1. Download the latest release tarball:

```
$ wget https://github.com/openucx/ucx/releases/download/v1.4.0/ucx-1.4.0.tar.gz
```

2. Extract package contents:

```
$ tar xzf ucx-1.4.0.tar.gz  
$ cd ucx-1.4.0
```

3. Run configure scripts. For optimal runtime performance, it's recommended to use the "release" mode configure script wrapper:

```
$ ./contrib/configure-release --prefix=$PWD/install
```

4. Build and install UCX in the 'install' subdirectory:

```
$ make -j8  
$ make install
```
